- **Pediarix:** A combination vaccine that helps prevent diphtheria, tetanus, pertussis, hepatitis B and polio.
 - Diphtheria can cause very bad throat infections that can cause the airway to close and can cause heart failure and paralysis.
 - Tetanus can cause paralysis of muscles and jaw.
 - Pertussis can cause whooping cough and can also cause pneumonia, seizures and brain damage.
 - Hepatitis B can cause a severe liver disease that can lead to liver failure.
 - Polio can cause permanent paralysis and meningitis.
- **Hib:** Helps prevent haemophilus Influenza B (can cause pneumonia and severe infections of the airway, heart, blood and bones).
- **Prevnar 13:** Helps prevent infections by the pneumococcal bacteria (can cause ear infections, pneumonia, and meningitis).
- **RotaTeq:** Helps prevent rotavirus (can cause severe diarrhea in infants). This vaccine is taken by mouth.
- **DTaP:** A combination vaccine that helps prevent diphtheria, Tetanus and whooping cough.
- **Varicella:** Helps prevent chickenpox (can cause severe skin infections, pneumonia, and brain damage).
- **MMR:** A combination vaccine that helps prevent measles, mumps and rubella.
 - Measles can cause ear infections, pneumonia, seizures and brain damage.
 - Mumps can cause deafness, meningitis, painful swelling of the testicles or ovaries, and rarely sterility.
 - Rubella can cause miscarriages and birth defects.
- **Hepatitis A:** Helps prevent Hepatitis A (a liver disease that can lead to liver failure).
- **Kinrix:** Helps prevent diphtheria, tetanus, whooping cough and polio
- **ProQuad:** A combination vaccine that prevents MMR and Varicella
- **TDaP:** Helps prevent tetanus, diphtheria and whooping cough.
- **Menveo:** Helps prevent meningococcus (can cause meningitis particularly in college age kids).
- **Gardasil:** Helps prevent human papillomavirus (can cause cervical cancer).

For more information on each of these vaccines, please talk to your doctor or see www.cdc.gov
